

OSBORNE™

Provide growth management of finishing pigs in large pens.

WEIGHT WATCHER™

Osborne Survey Scales automatically sort pigs into groups to feed separate rations and sort market weight pigs.

- Reduce feed costs through targeted phase feeding.
- Match your packer's matrix to cut market sort loss.
- Turn barns faster.
- Market more pounds of pork.
- Pigs load easier and with less stress.

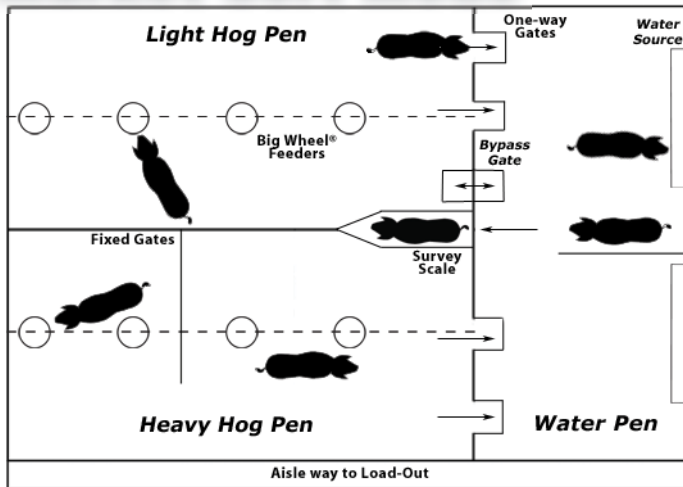

HOW IT WORKS

- Weight Watcher™ uses the natural movement of pigs from feed to water to automatically sort pigs into two groups.
- Finishing barn is organized into two large pen feeding areas (80% of the building space) and a water area (20% of the building space).
- Separating the feed from water causes pigs to move naturally through the Survey Scale to be sorted to one of the two feeding areas: heavy hogs or light hogs.

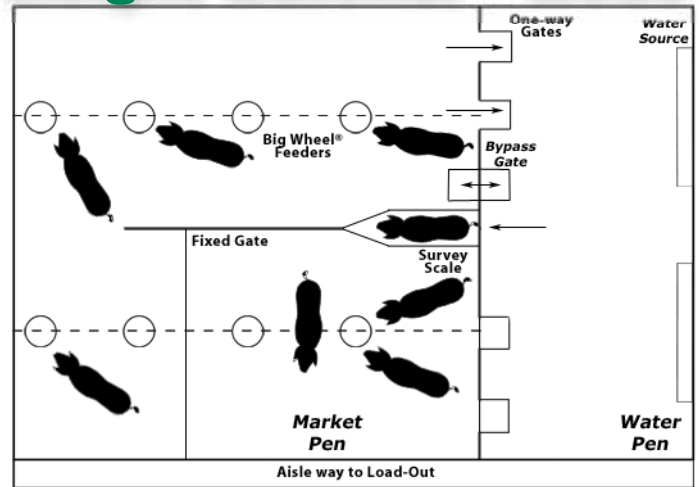

Market Sort Mode

- A pig in the water area enters the Survey Scale.
- The Survey Scale automatically diverts the pig to the appropriate feeding area based on a pre-determined weight set point.
- The pig can leave the feeding area at any time and return to the water area through a one-way gate as many times a day as it chooses.

Weight Watcher™ Mode

- The Survey Scale can be set to detect animals which exceed a pre-determined market weight.
- A pig in the water area enters the Survey Scale.
- Pigs that have reached the targeted market weight are sorted into the market pen.
- Pigs that are below the targeted market weight are sorted into the light pen.
- Pigs sorted into the market pen can then be easily loaded and shipped to market.

DAILY WEIGH™ SOFTWARE

The Daily Weigh™ software for the Weight Watcher™ Growth Management System stores and presents the information collected daily by Osborne Survey Scales.

- Review animal activity and environmental conditions.
- Track growth, spot growth trends and display pen and weight distributions.
- Forecast dates and the number of market hogs at specific weight ranges available for market.
- Monitor individual animal growth rates with optional feature Daily Weigh Two™ when animals and Survey Scales are equipped with RFID.

DAILY WEIGH REPORTS

- Room Monitor
- Distribution
- Growth Curve
- Phase Feeding
- Market Predictor
